

\*\*REPRESENTATIVE DATASHEET\*\*

# Goat anti-human Plasminogen (Pg)

Whole IgG from antiserum 5 mg

Product #: GAPG-IG

Lot #: XXXX Expiry date: XXXX

Store at -10 to -20°C

1348 Sandhill Drive. Ancaster, Ontario, Canada L9G 4V5 905-304-9896 • 800-903-6020 • fax 905-304-9897

For Research Use Only.

Not for use in diagnostic procedures.

## Description of Plasminogen (Pg)

Plasminogen (Pg) is synthesized in the liver and circulates in plasma at a concentration of  $\sim 200 \, \mu \text{g/ml}$  ( $\sim 2.3 \, \mu \text{M}$ ). Plasminogen is a single-chain glycoprotein of ~88 kDa that consists of a catalytic domain followed by five kringle structures. Within these kringle structures are four low-affinity lysine binding sites and one high-affinity lysine binding site. It is through these lysine binding sites that plasminogen binds to fibrin and to α2antiplasmin. Native plasminogen (gluplasminogen) exists in two variants that differ in their extent of glycosylation, and each variant has up to six isoelectric forms with respect to sialic acid content, for a total of 12 molecular forms. Activation of glu-plasminogen by the plasminogen activators urokinase (UPA), or tissue plasminogen activator (tPA) occurs by cleavage after residue Arg<sup>560</sup> to produce the two-chain active serine protease plasmin. In a positive feedback reaction, the plasmin generated cleaves an ~8 kDa peptide from glu-plasminogen, producing lys77-plasminogen which has a higher affinity for fibrin and when bound is a preferred substrate for plasminogen activators such as urokinase. Additional activators of plasminogen include kallikrein and activated factor XII. The primary inhibitor of plasmin in plasma is  $\alpha_2$ antiplasmin. Other physiological inhibitors of plasmin include α<sub>2</sub>macroglobulin antithrombin<sup>1-3</sup>.

## **Product Specifications**

### **Description:**

Vial containing **XXXX** ml of whole IgG representing approximately 1 ml of antiserum. Total protein is 5 mg.

#### Format:

Whole IgG, clear liquid.

#### **Host Animal:**

Goat

### Immunogen:

Human plasminogen purified from plasma.

#### **Concentration:**

IgG concentration is **XXXX** mg/ml, determined by absorbance using an extinction coefficient ( $E^{1\%}_{280}$ ) of 13.4.

#### **Buffer:**

10 mM HEPES, pH 7.4, 150 mM NaCl, 50% (v/v) glycerol.

### Storage:

Store between -10 and -20°C. Product will become viscous but will not freeze. Avoid storage in frost-free freezers. Keep vial tightly capped. Allow product to warm to room temperature and gently mix before use.

### **Specificity:**

This antibody is specific for plasminogen as demonstrated by immunoelectrophoresis and ELISA.

#### **Applications:**

Suitable as a source of antibodies to human plasminogen.

## Neutralizing activity:

Not determined

## Species Cross Reactivity: (immunodiffusion vs. citrated plasma)

Human:	XXXX	Mouse:	XXXX	Rat:	XXXX
Rabbit:	XXXX	Pig:	XXXX	Dog:	XXXX
